Dark Wolf
Clearance Level: TS/SCI

Summary of Experience

I am a professionally "young" full stack software developer. I earned a degree in Computer Engineering but heavily leaned more towards the software side. I have more experience with backend programming (data structures, algorithms, logic organization, etc.) from personal projects and heavy backend schooling. Through my professional career I have gained more frontend experience and like diving into that realm of programming to learn more.

Skills

Hardware	Software	Programming Languages	Other
●	● MongoDB ● VMware vSphere ● Atlassian Tool Suite ● Git ● Packer	● Node.js ● React ● Java ● Python ● C++	● Agile ● Linux Operating Systems

Work Experience

Dark Wolf, Colorado Springs, CO 07/2023 – Present
Associate Software Engineer, Sentinel

- Developed front and back-end code for multiple tools used in the Manticore system. Mainly adding improvements to the Master Station Log and Cyber Mission Mapping.
- Designed and implemented multiple features requested by operators.
- Demoed completed objectives and updates to our Product Owners and other teams working on Manticore.

• Assigned Subject Matter Expert for the Master Station Log tool.

L3harris Technologies, Colorado Springs, CO 05/2021 – 07/2023
Associate Software Engineer

• ISW/ATSS : Worked on fixes for a complex counter communication system. Hands on with hardware such as Spectrum Analyzers, Decoders, and Attenuators. Touched installation scripts, altered code to pass Coverity scans, and made general updates.
• Training Records: Created an internal tool made from scratch by myself to aid the Technical Trainers in keeping track of all employee's training process. Used this opportunity to learn software I had never touched before.
• GBOSS: Integrated Syntrack (software written by NASA JPL) to our deep space telescope software.
• TRAX: Worked with a small team for a company-wide application used to easily create surveys.
• PEER Coordinator: Took a step out of the normal software role to lead our program that helps new hires. I was responsible for keeping track of incoming team members, assigning them an employee on their team to help them, minimizing transition downtime to allow new employees to quickly get up to speed and start work.

SS&C Advent, Jacksonville, FL 05/2018 – 08/2018
Product Development Intern

• Rotated teams bi-weekly to focus on building software skills that touch different parts of the platform.
• Designed back-end and front-end of an internal tool to help monitor the process of data imported by clients.
• Connected different processes to routinely run a SQL query and output any anomalies to a specific Slack channel.
